

Space is limited at some locations. Register today and make sure you receive this required training!

What to expect: Basic Principles and Practices is a **two-day course** taught by a qualified instructor. Students will take a number of quizzes and tests in order to assess their pace of learning. The course includes displays of valves, fittings and other industry components as well as live demonstrations of the properties of propane. Students will take a 100-question multiple choice test at the end of the class; these tests are graded by a third-party and the results are mailed to each company. A minimum score of 75% must be attained to pass the test.

MO-PERC funding underwrites the cost of student and test materials as well as a copy of 2020 NFPA 58, pencils, markers and other materials. Lunch and break refreshments are provided. Other meals, lodging, and travel are not included.

Every Registrant must attend the entire two days of training and receive a 75% on the final test in order to be certified.

This seminar is certified by St. Louis County for 8 Professional Education Units.

Basic Principles & Practices

CETP Module 1 Propane Certification Training

Offered by the Missouri Propane Gas Association

Supported by the Missouri Propane Education and Research Council

Who should attend: Basic Principles and Practices is the introductory course for all employees, owners, managers and others who handle, store or transport propane in the State of Missouri. State law requires that these industry personnel must attend and complete an approved, state-certified training program every three years. Basic Principles & Practices is the prerequisite for all other CETP courses. It covers: the physical properties and combustion characteristics of propane; identifying propane industry standards; safety codes and regulations; identifying basic parts of tanks; cylinders, fittings and storage installations; maintaining a safe working environment; and more.
